

Project Management

VecTrance's mission is to provide energy and infrastructure companies with international consulting services and engineering expertise, for their operational and development projects around the world.

We understand the importance for you to execute your complex and innovative projects with quality standards that exceed expectations, in-line-with or under budget, within set deadlines and under strict health, environment and safety guidelines.

The management of your project through the optimization of costs, schedules and quality, allied to the perfect coordination of execution is paramount to its success. To ensure you have the right **project control management**, we support you with a team of project managers in the energy and infrastructure industries, that are recruited worldwide and bring plethora of technical know-how and transferable skills.

Engineering Consultancy Services**

The skills brought by our Project Managers

On the project site, our Project Managers are supported by your technical department to respect the monthly contract objectives and to meet your requirements. They work closely with your teams to identify and assess opportunities for improved performance and provide full support in the implementation of necessary changes to achieve real and lasting benefits.

Planning and scheduling

Identifying tasks, resources, timing and logical sequences:

- Implementation of planning & method to control the physical and budget status
- Work structuring using WBS, OBS, RBS, CBS, level 2, level 3
- Physical progress follow-up
- Management charts set-up and project reporting

Cost control

Assessing project expenditures to compare them with the budget:

- Implementation of a cost control system managing EPC phases
- Evaluation of expenditures in relation with planning, resources and reporting
- Breakdown of project control
- Progress control

Contract management & claims

Ensuring a proper contract drawing up and application:

- Setting-up of contract clauses
- Definition of delivery, payment, delay and technical quality conditions
- Management of contract changes and claims negotiations
- Subcontract administration
- Quantity surveying

Risk management

Identification and assessment of risks and liabilities incurred at the technological, industrial or financial level:

- Study of the statistical probabilities both of fortuitous risks (accidents, fire or theft) and of those linked to strategic decisions.
- Provide the decision-makers with the necessary items of information to avoid wrong decisions being taken.

Need support on a project ?
